AsapSCIENCE by Mitchell Moffit, Greg Brown | Audiobook ...
AsapScience, stylized as AsapSCIENCE, is a YouTube channel created by Canadian YouTubers Mitchell Moffit and Gregory Brown. The channel produces weekly videos that touch on many different topics of science. The two creators have a secondary channel, Greg and Mitch (formerly AsapTHOUGHT), which contains videos discussing several topics (not all pertaining to science).

"In their first-ever book, Mitchell Moffit and Greg Brown, the [guys] behind the wildly popular YouTube channel AsapSCIENCE, answer your burning questions, explaining the true science of how things work."--P. 4 of cover.

Finalist for the Los Angeles Times Book Prize From the man who Oliver Sacks hailed as “one of the best scientist/writers of our time,” a collection of sharply observed, uproariously funny essays on the biology of human culture and behavior. In the tradition of Stephen Jay Gould and Oliver Sacks, Robert Sapolsky offers a sparkling and erudite collection of essays about science, the world, and our relation to both. “The Trouble with Testosterone” explores the influence of that notorious hormone on male aggression. “Curious George’s Pharmacy” reexamines recent exciting claims that wild primates know how to medicate themselves with forest plants. “Junk Food Monkeys” relates the adventures of a troop of baboons who stumble upon a tourist garbage dump. And “Circling the Blanket for God” examines the neurobiological roots underlying religious belief. Drawing on his career as an evolutionary biologist and neurobiologist, Robert Sapolsky writes about the natural world vividly and insightfully. With candor, humor, and rich observations, these essays marry cutting-edge science with humanity, illuminating the interconnectedness of the world’s inhabitants with skill and flair.

From the award-winning author of The Song of the Dodo comes a collection of essays in which various weird and wonderful aspects of nature are examined. This book contains tales of vegetarian piranha fish, voiceless dogs, and a scientific search for the genes that threaten to destroy the cheetah.

This book is targeted mainly to the undergraduate students of USA, UK and other European countries, and the M. Sc of Asian countries, but will be found useful for the graduate students, Graduate Record Examination (GRE), Teachers and Tutors. This is a by-product of lectures given at the Osmania University, University of Ottawa and University of Tebrez over several years, and is intended to assist the students in their assignments and examinations. The book covers a wide spectrum of disciplines in Modern Physics, and is mainly based on the actual examination papers of UK and the Indian Universities. The selected problems display a large variety and conform to syllabi which are currently being used in various countries. The book is divided into ten chapters. Each chapter begins with basic concepts containing a set of formulae and explanatory notes for quick reference, followed by a number of problems and their detailed solutions. The problems are judiciously selected and are arranged section-wise. The so- tions are neither pedantic nor terse. The approach is straight forward and step- step solutions are elaborately provided. More importantly the relevant formulas used for solving the problems can be located in the beginning of each chapter. There are approximately 150 line diagrams for illustration. Basic quantum mechanics, elementary calculus, vector calculus and Algebra are the pre-requisites.

WHILE TRAVELING AROUND THE COUNTRY to report on the conditions in which captive chimpanzees in America live, Charles Siebert visited a retirement home for former ape movie stars and circus entertainers in Wauchula, Florida, known as the Center for Great Apes. There Siebert encountered Roger, a twenty-eight-year-old former Ringling Bros. star who not only preferred the company of people to that of his fellow chimps but seemed utterly convinced that he knew the author from some other time and place. "Mostly I was struck by Roger's stare," writes Siebert, "his deep-set hazel eyes peering out at me with what, to my deep discomfort, I'd soon realize is their unchanging expression. It is a beguiling mix of amazement and apprehension, the look, as I've often thought of it since, of a being stranded between his former self and the one we humans have long been suggesting to him. A sort of hybrid of a chimp and a person. A veritable 'humanzee.'" Haunted by Roger's demeanor, Siebert promptly moved into a cottage on the grounds of the Center for Great Apes, spending day after day with Roger, trying to get to the bottom of the mysterious connection between them. And then late one night, awakened by the cries of chimpanzees, a sleepless and troubled Siebert suddenly began to conjure a secret, predawn encounter with his new cross-species confidant, an apparently one-sided conversation that, in fact, takes us to the very heart of the author's relationship with Roger and of our relationship with our own captive primal selves. The result is The Wauchula Woods Accord, a strikingly written, wide-ranging physical and metaphysical foray out along the increasingly fraught frontier between humans and animals; a journey that encompasses many of the author's encounters with chimpanzees and other animals, as well as the latest scientific discoveries that underscore our intimate biological bonds not only with our nearest kin but with far more remoteseeming life-forms. By journey's end, the reader arrives at a deeper understanding both of Roger and of our numerous other animal selves, a recognition -- an accord -- that carries a new sense of responsibility for how we view and treat all animals, including ourselves.

Welcome, fellow humans (and others), to the the world of FUN SCIENCE! I'm Charlie, also known across the internet as charlieissoooliike. In my book, I take you on an awesome journey through the cosmos, beginning with the Big Bang through to the Solar System and the origins of life on Earth, all the way down to the particles that make up everything around us (including you and me!). Expect frequent digressions, tons of illustrations of not-so-sciencey things (NB a microwave flying through space), and pages packed with my all time favourite mind-bending science facts. So, get ready for a faster-than-the-speed-of-light (OK, not quite) tour of all of the best and most interesting things that science has to offer us... and most importantly: WELCOME TO THE UNIVERSE! (Written by a science fan NOT a scientist!)

"This tour of real-world mathematical disasters reveals the importance of math in everyday life. All sorts of seemingly innocuous mathematical mistakes can have significant consequences. Exploring and explaining a litany of glitches, near misses, and mathematical mishaps involving the internet, big data, elections, street signs, lotteries, the Roman Empire, and an Olympic team, Matt Parker uncovers the ways math trips us up." --

Child-rearing reaches an entirely new level of delightfully messy chaos in Baby Blues: Wetter, Louder, Stickier. Battle-ready and perpetually exhausted, Daryl and Wanda team up to navigate a new front of challenges, like Zoe's enthusiasm over the "Smoochy Boyz" concert, deciphering baby Wren's attempts at language, and determining Hammie's place as a colon in the school play--whether "colon" refers to punctuation or digestion remains undetermined. Armed with "performance-enhancing substances" (a.k.a., chocolate donuts), the perfectly normal MacPherson family will surely bring a barrage of smiles and laughter to familiar fans with their perfectly chaotic lives. Baby Blues has enchanted new parents, grandparents, and kids alike since it first appeared on the comics pages in 1990. As the years passed, the list of newspapers carrying the feature has grown almost as fast as the MacPhersons' kids! Baby Blues now appears in more than 1,200 newspapers worldwide, and the adventures of America's favorite first-time parents have also been chronicled in 31 anthologies and four treasuries. In 1995, the National Cartoonists Society recognized Baby Blues as "Best Comic Strip of the Year."

Science is an ever-growing, ever-changing field of study. Every principle, every discovery is built on top of a previous discovery. Great scientists have studied life, the environment, and the physical world trying to learn more about why things are the way they are. Readers gain insight to some of the greatest scientific minds history has to offer, from Archimedes to Stephen Hawking.

In a small midwestern town the unthinkable happens... In a murder mystery/thriller, two Minnesota detectives investigate a routine murder, and soon they are targets of unknown assailants, as they become enmeshed in a matter of national security. But will Detectives Paisley and Boone, solve their predicament in time, to prevent a massive catastrophe? BUY NOW to follow Detectives Paisley and Boone's harrowing adventure, as they face dangers from all directions, while racing to prevent a catastrophe of massive proportions!
