Markets in Profile explores the confluence of three disparate philosophical frameworks: the Market Profile, behavioral finance, and neuroeconomics in order to present a unified theory of how markets work. The Market Profile is an ever-evolving, multidimensional graphic that gives visual form to the market's continuing auction process, revealing the myriad underlying dynamics that influence market activity. Behavioral finance posits that investors are driven more by emotional factors and the subjective interpretation of minutia than by "rationality" when making investment decisions. And neuroeconomics is the study of how investor psychology permeates and affects the financial markets. Mr. Dalton explicates the ways in which irrational human behavior influences the market's natural auction process, creating frequently predictable market structure, which results in opportunities for investors to ameliorate risk. The book will improve investors ability to interpret change in markets, enabling better, more confident investment decisions.

Proven techniques for market profile users at any level A "market profile" presents a number of basic elements from the market in an easily understood graphic format that, when analyzed properly, can yield profitable intraday and swing trades that traditional indicators do not reveal. Steidlmayer on Markets shows readers how to find these opportunities using the innovative techniques developed by the author during his many years of trading the market. This fully updated Second Edition covers innovations in both technology and technique-and broadens the scope of "market profile" to include stocks. J. Peter Steidlmayer (Chicago, IL) joined the Chicago Board of Trade in 1963 and has been an independent trader ever since. Steidlmayer served on the Board of Directors of the Board of Trade in 1981-1983. While a director, he was responsible for initiating Market Profile and the Liquidity Data Bank. Steve Hawkins (Chicago, IL) has experience in trading in both stocks and commodities. Over the past seven years, Hawkins has educated traders across the globe. He has also collaborated on the writing of books on trading and written articles for industry trade publications. He is a graduate of the University of Illinois with a degree in economics. New technology and the advent of around the clock trading have opened the floodgates to both foreign and domestic markets. Traders need the wisdom of industry veterans and the vision of innovators in today's volatile financial marketplace. The Wiley Trading series features books by traders who have survived the market's ever changing temperament and have prospered-some by reinventing systems, others by getting back to basics. Whether a novice trader, professional or somewhere in-between, these books will provide the advice and strategies needed to prosper today and well into the future.

A complete guide to Steidlmayer's new approach to markets, especially the futures markets. Part I provides background information based on Steidlmayer's experiences as a commodities trader, showing how he developed his ideas and learned to apply them to futures trading. Part II outlines his theory of markets, explains factors that determine prices, and describes the Market Profile and Liquidity Data Bank systems. Part III provides detailed applications, showing how to read market activity, recognize both fundamental and technical factors underlying price movements, and make sound investment and trading decisions.

In his debut book on trading psychology, Inside the Investor's Brain, Richard Peterson demonstrated how managing emotions helps top investors outperform. Now, in Trading on Sentiment, he takes you inside the science of crowd psychology and demonstrates that not only do price patterns exist, but the most predictable ones are rooted in our shared human nature. Peterson's team developed text analysis engines to mine data - topics, beliefs, and emotions - from social media. Based on that data, they put together a market-neutral social media-based hedge fund that beat the S&P 500 by more than twenty-four percent—through the 2008 financial crisis. In this groundbreaking guide, he shows you how they did it and why it worked. Applying algorithms to social media data opened up an unprecedented world of insight into the elusive patterns of investor sentiment driving repeating market moves. Inside, you gain a privileged look at the media content that moves investors, along with time-tested techniques to make the smart moves—even when it doesn't feel right. This book digs underneath technicals and fundamentals to explain the primary mover of market prices - the global information flow and how investors react to it. It provides the expert guidance you need to develop a competitive edge, manage risk, and overcome our sometimes-flawed human nature. Learn how traders are using sentiment analysis and statistical tools to extract value from media data in order to: Foresee important price moves using an understanding of how investors process news. Make more profitable investment decisions by identifying when prices are trending, when trends are turning, and when sharp market moves are likely to reverse. Use media sentiment to improve value and momentum investing returns. Avoid the pitfalls of unique price patterns found in commodities, currencies, and during speculative bubbles Trading on Sentiment deepens your understanding of markets and supplies you with the tools and techniques to beat global markets— whether they're going up, down, or sideways.

"The Market Profile continues to revolutionize futures market analysis. By organizing price and time into a usable format, the Market Profile provides extraordinary insights into the dynamics of the marketplace. Indeed, through the prism of the profile, many traders feel they can actually "read" the market." "Unfortunately, the process of translating Market Profile analysis into profitable trades has been difficult for many traders - at least until now. Value-Based Power Trading brings to life the dormant potential of the Market Profile, providing traders with an explicit, rule-based system that utilizes the insights afforded by the profile to generate consistently profitable trading signals." "In this important new book, Donald Jones demonstrates how his patented Overlay Demand Curve TM integrates data into a "super profile" which identifies the market's structure and condition. The "super profile" shows what the market's principal players are doing, where value exists, and provides traders with the ability to interpret market behavior as it unfolds." "Jones explains how to spot critical "reference points" that define the market's long-term condition. Once the reference points are clear, a trader can plot strategy in an objective, unambiguous manner." "Unlike previous books on the Market Profile, Value-Based Power Trading explains how to analyze the market from both a long-term and short-term perspective. It shows how to recognize market turning points and it provides traders with precise strategies to profit from major market moves." "Jones provides systems for day trading, breakout trading and responsive trading. He shows how to choose the right strategy for any given market situation. Most importantly, he proves the profitability of his systems by subjecting them to real-market tests. The shift from price-based, technical analysis to value-based, Market Profile analysis is a revolution in the making. Value-Based Power Trading may very well mark a culmination of that revolution."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. All Rights Reserved
